Door Access Control System
NS1133VHG

This one-button, surface mount door access control system offers a revolutionary new design concept that incorporates a backward facing speaker where the sound is ported to sound vents on the side of the unit.

Suitable if you want visitors to easily get in touch with a member of staff.

This system is designed for indoor and outdoor use.

Benefits and Features

Touch sensitive

The unit is machined out of a solid block of aluminium and supports touch sensitive Piezo technology.

Day and night mode

The unit supports day and night mode that allows you to divert all incoming door calls directly to any predefined number.

Hidden speaker

The unit supports a rear facing speaker with porting holes.

Password protected

The unit is password protected to prevent access to the unit's programming and configuration.

Easy to program

The unit is user programmable via an extension phone using DTMF via the telephone keypad.

Lock release

The unit can be connected to lock release mechanisms/gates to control access via the telephone handset using DTMF tones.

Technical Parameters

Signalling protocol

Analogue
DTMF

Buttons

Button format - Touch sensitive white bell sign
Number of ring buttons - 1

Audio

Microphone - 1 inbuilt bottom mounted
Speaker - Rear mounted

Interfaces

Power requirements - 12VDC+15%, 12VAC+15% at 1.5A
Release contacts - Relay NO/NC, Max VDC 2A
Communication - PBX extension

Mechanical properties

Dimensions - 130x66x33 mm
Construction - Cast alloy body with a polished acrylic front
Mount style - Surface
